PROBLEM

Cheap cross-border shopping is still hard work

Prices are low, but four problems stand between the shopper and a confident purchase.

01 **Listings are messy**

Supplier pages arrive with rough translations, missing attributes and inconsistent size charts.

02 **Size is hard to judge**

Shoppers hesitate at payment because they can’t tell what will fit.

03 **Middlemen add markup**

Resellers and large manual teams sit between the supplier and the shopper.

04 **The AI chat hands off**

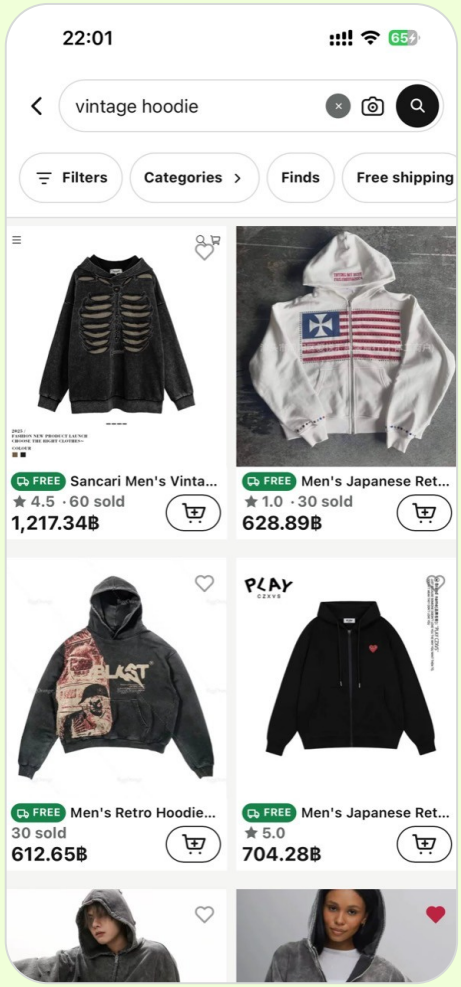

People start in an AI assistant, then get sent to a website to finish alone.

PRODUCT

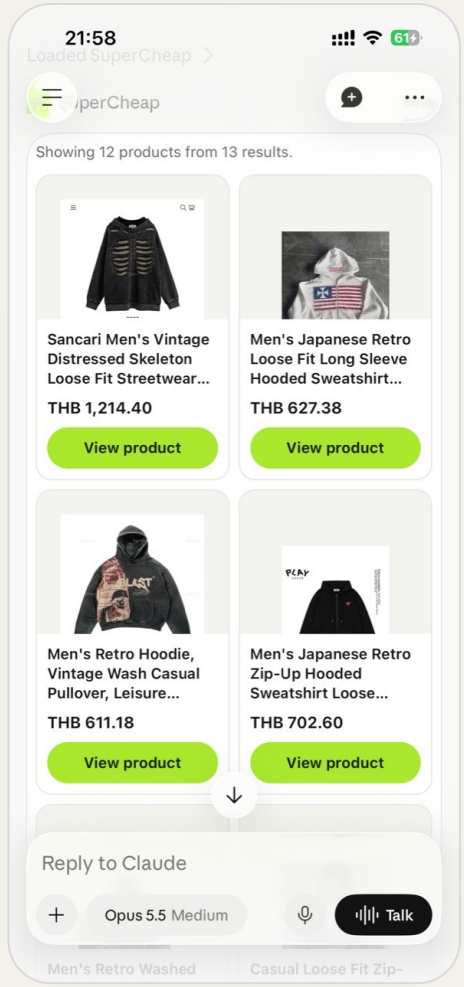

One catalog, wherever the shopper starts

Shop in the SuperCheap app, or ask an AI assistant like Claude. Same products, same checkout.

Real product screens.
Prices shown in THB, as captured.

FIT AND SIZE

Will it fit?

#1 reason shoppers gave for hesitating before payment in our earlier survey

BEFORE PAYING

- AI reads and translates supplier size charts.
- Fit guidance compares the shopper’s measurements with the chart.

BEFORE SHIPPING

- **The shopper sees warehouse photos of the actual item.**
- **Not right? The shopper can decline it before it ships.**

Illustration

Two checkpoints: fit guidance before paying, and the shopper’s own look before shipping.

WHY NOW?

A small team can now build a Temu-class operation

BEFORE

A large team, plus resellers

- Catalog cleanup and translation by hand
- A support desk for every order question
- Manual creator outreach
- Reseller markup on top of the supplier price

TODAY

AI agents do the work. People review.

Catalog data	Clean, translated listings from messy supplier text, photos and size charts.
Order support	Agents pull order and tracking context and draft replies for review.
Creator growth	Agents find creators, run email outreach and track campaigns.

Less reseller markup should mean lower average prices for shoppers.

WHY NOW? THE U.S. MARKET

A huge market, and a new front door that is growing fast

$340.2B

U.S. retail e-commerce sales in Q2 2026

+12.2% year over year · 17.1% of all retail sales

+71%

AI-referred visits to U.S. retail sites, September 2026 vs. a year earlier

1.2B

weekly ChatGPT users worldwide, reported September 2026

U.S. Census Bureau · Adobe Digital Insights · OpenAI

COMPETITION

Same low-price supply. Built for the shopper's agent.

	Temu	AliExpress	SuperCheap
Low-price products from Chinese suppliers	Yes	Yes	**Yes**
Reseller markup in the chain	Common	Common	**Reduced by design**
Public developer access	Seller and partner APIs	Product and affiliate APIs	**Customer MCP**
Shopper's agent can search, buy and get support	Not found in reviewed public docs	Not found in reviewed public docs	**Available**

The opening is the combination: low-price supplier commerce, shopper-agent access and lean AI operations.

Review of official public documentation, 31 Oct 2026. Private integrations may exist. Terms vary by region.

BUSINESS MODEL

Margin now, platform revenue later

TODAY

~20%

take rate on every order

Platform revenue before payments, fulfillment, refunds, acquisition and support costs.

LATER, AS DEMAND GROWS planned

Promoted placements

Paid visibility for suppliers once shopper traffic is dense.

Supplier onboarding

Open the marketplace to more suppliers on a take rate.

Adjacent categories

Point the same catalog and agent stack at new product lines.

PREVIOUS LAUNCH · DIFFERENT REGION

The model was already validated with real money

Results from the founder’s earlier launch of the same marketplace model, in a different region.

$489K

GMV

Paid acquisition channel already proven

14.3K orders

7.6K buyers

~$8 paid CAC per buyer

FOUNDER

Has built, scaled and sold before

Aleksei Balchunas

Founder and technical lead

TWO EXITS

Hypee, a photo and video editor, acquired by Yandex in a deal valued at about $3.1M.

AI Boost, an AI photo and video product, sold for about $450K.

BUILT THE STACK HIMSELF

SuperCheap’s software and AI, from the catalog pipeline to the shopper MCP, is his own work.

RAN THIS MODEL BEFORE

Launched the same marketplace model and grew it to 14.3K orders: acquisition, supply, payments and support.

Full-time on SuperCheap since August 2026 · self-funded

SUPER CHEAP

Shopping that works wherever the shopper starts, including their AI. And for less.

NEXT: FIRST U.S. TRACTION

01

Put paid acquisition behind the channel playbook that worked before.

02

Tune the funnel, starting with checkout and fit confidence.

03

Prove repeat buying in the U.S.
